# **Role-Based Access Control**

## **The RBAC96 Model**

# ROLE-BASED ACCESS CONTROL (RBAC)

- ◆ **A user's permissions are determined by the user's roles**
  - **rather than identity or clearance**
  - **roles can encode arbitrary attributes**
- ◆ **multi-faceted**
- ◆ **ranges from very simple to very sophisticated**

# RBAC SECURITY PRINCIPLES

---

- ◆ **least privilege**
- ◆ **separation of duties**
- ◆ **separation of administration and access**
- ◆ **abstract operations**

# RBAC96

IEEE Computer Feb. 1996

---

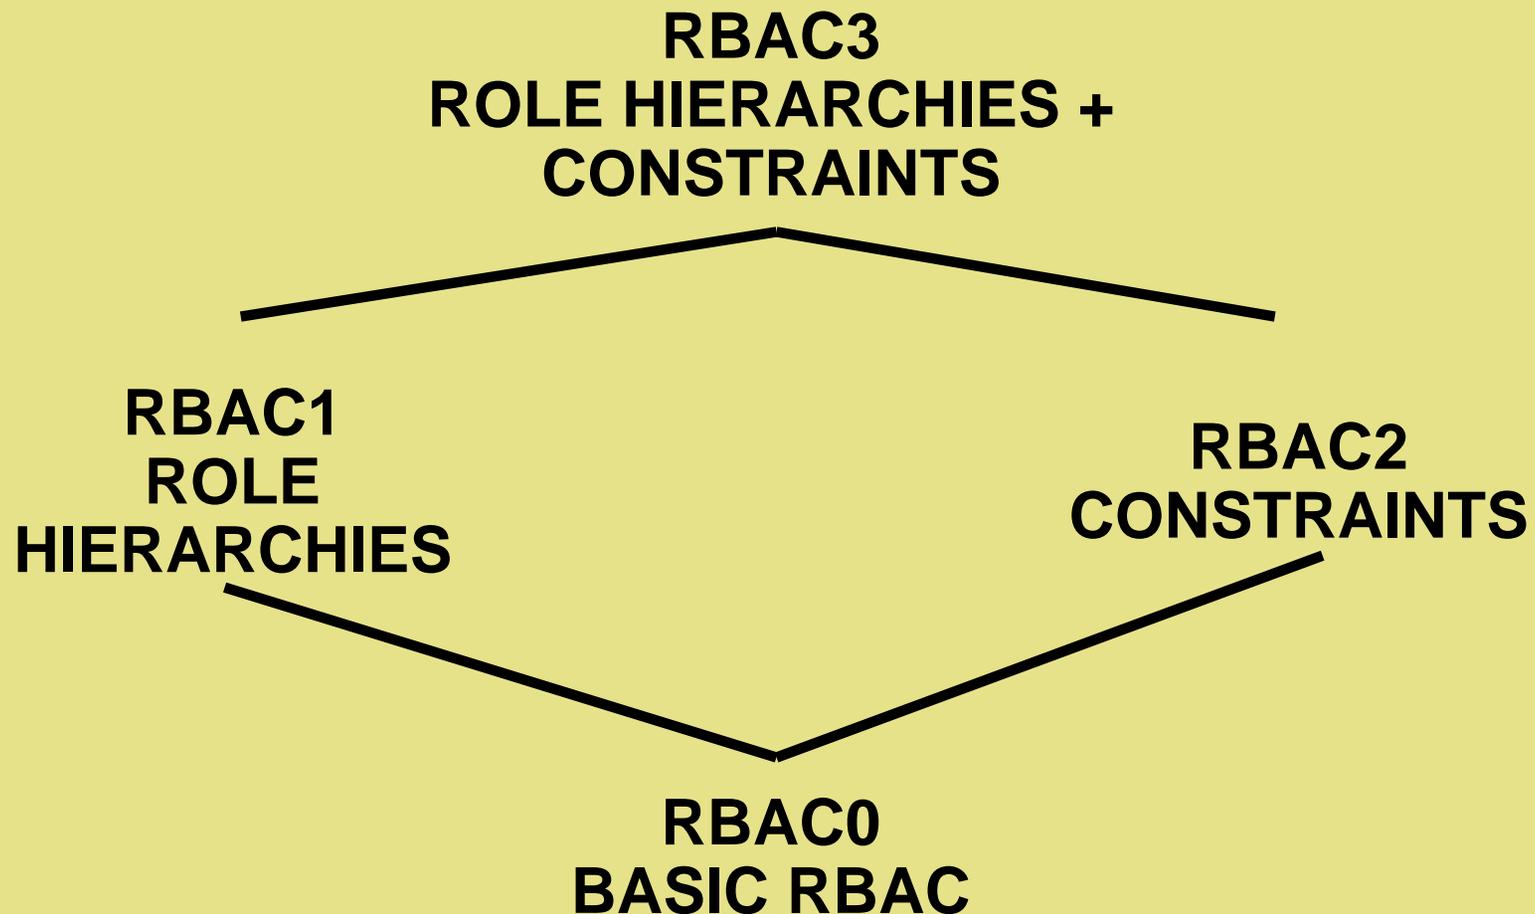

- ◆ **Policy neutral**
- ◆ **can be configured to do MAC**
  - **roles simulate clearances (ESORICS 96)**
- ◆ **can be configured to do DAC**
  - **roles simulate identity (RBAC98)**

# RBAC CONUNDRUM

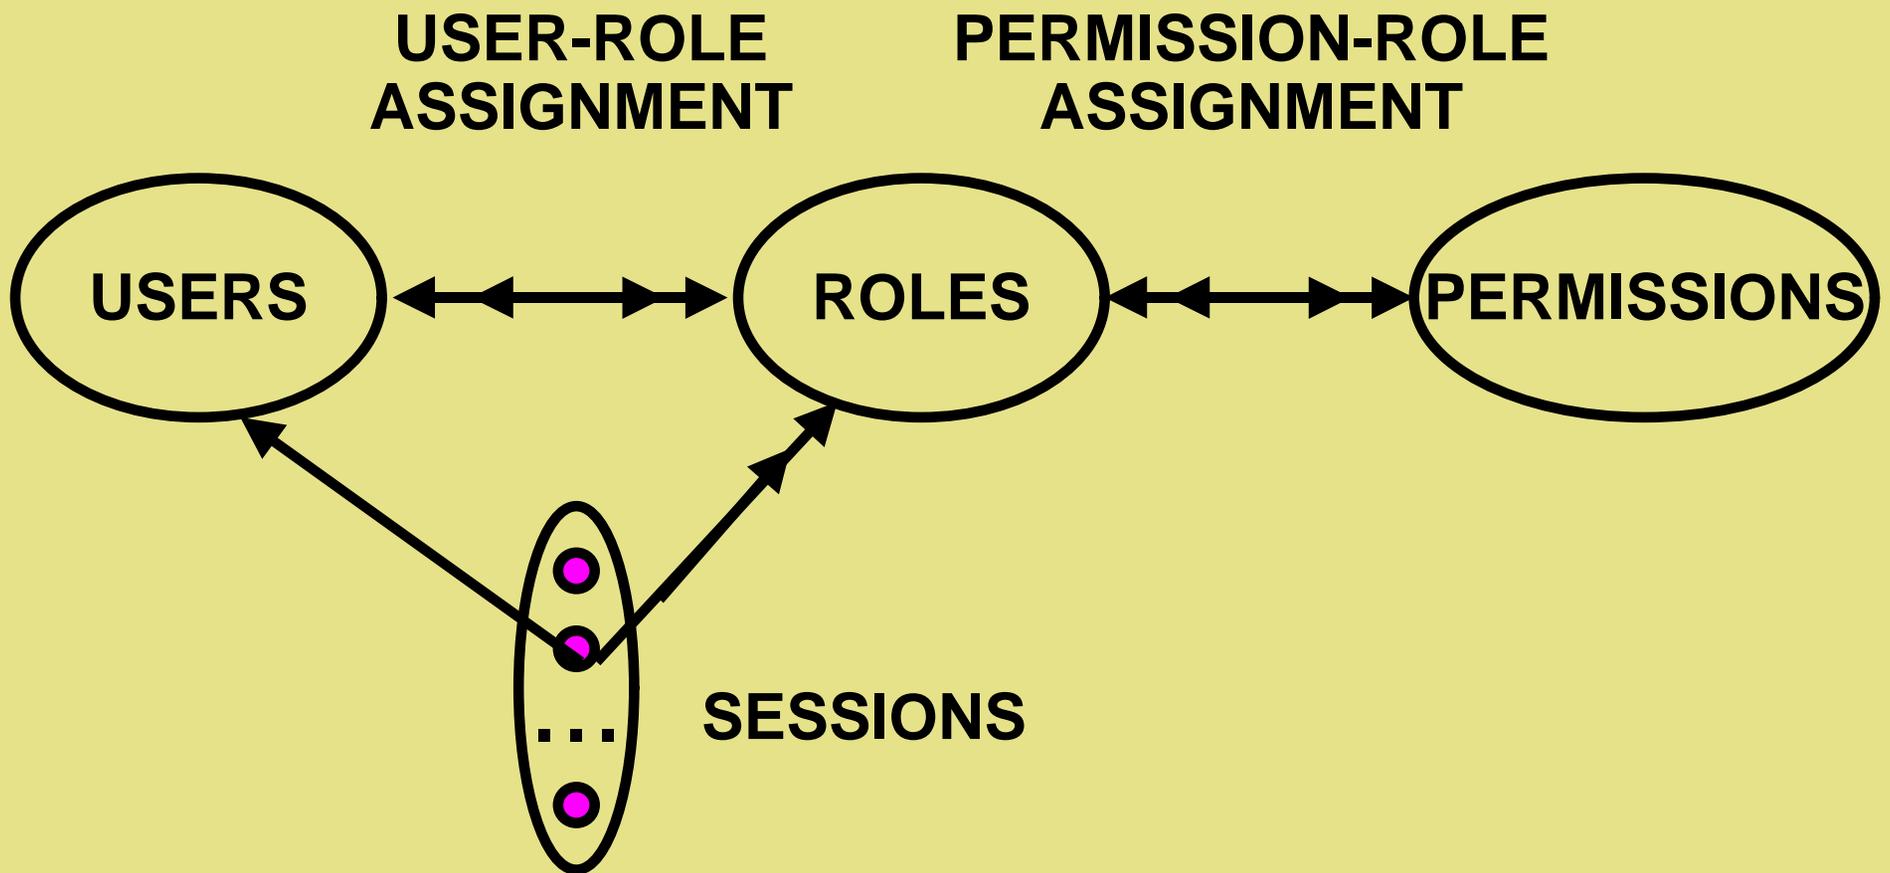

---

- ◆ **turn on all roles all the time**
- ◆ **turn on one role only at a time**
- ◆ **turn on a user-specified subset of roles**

# RBAC96 FAMILY OF MODELS

# RBAC0

# PERMISSIONS

---

- ◆ **Primitive permissions**
  - read, write, append, execute
- ◆ **Abstract permissions**
  - credit, debit, inquiry
- ◆ **System permissions**
  - auditor, operator, back-up operator

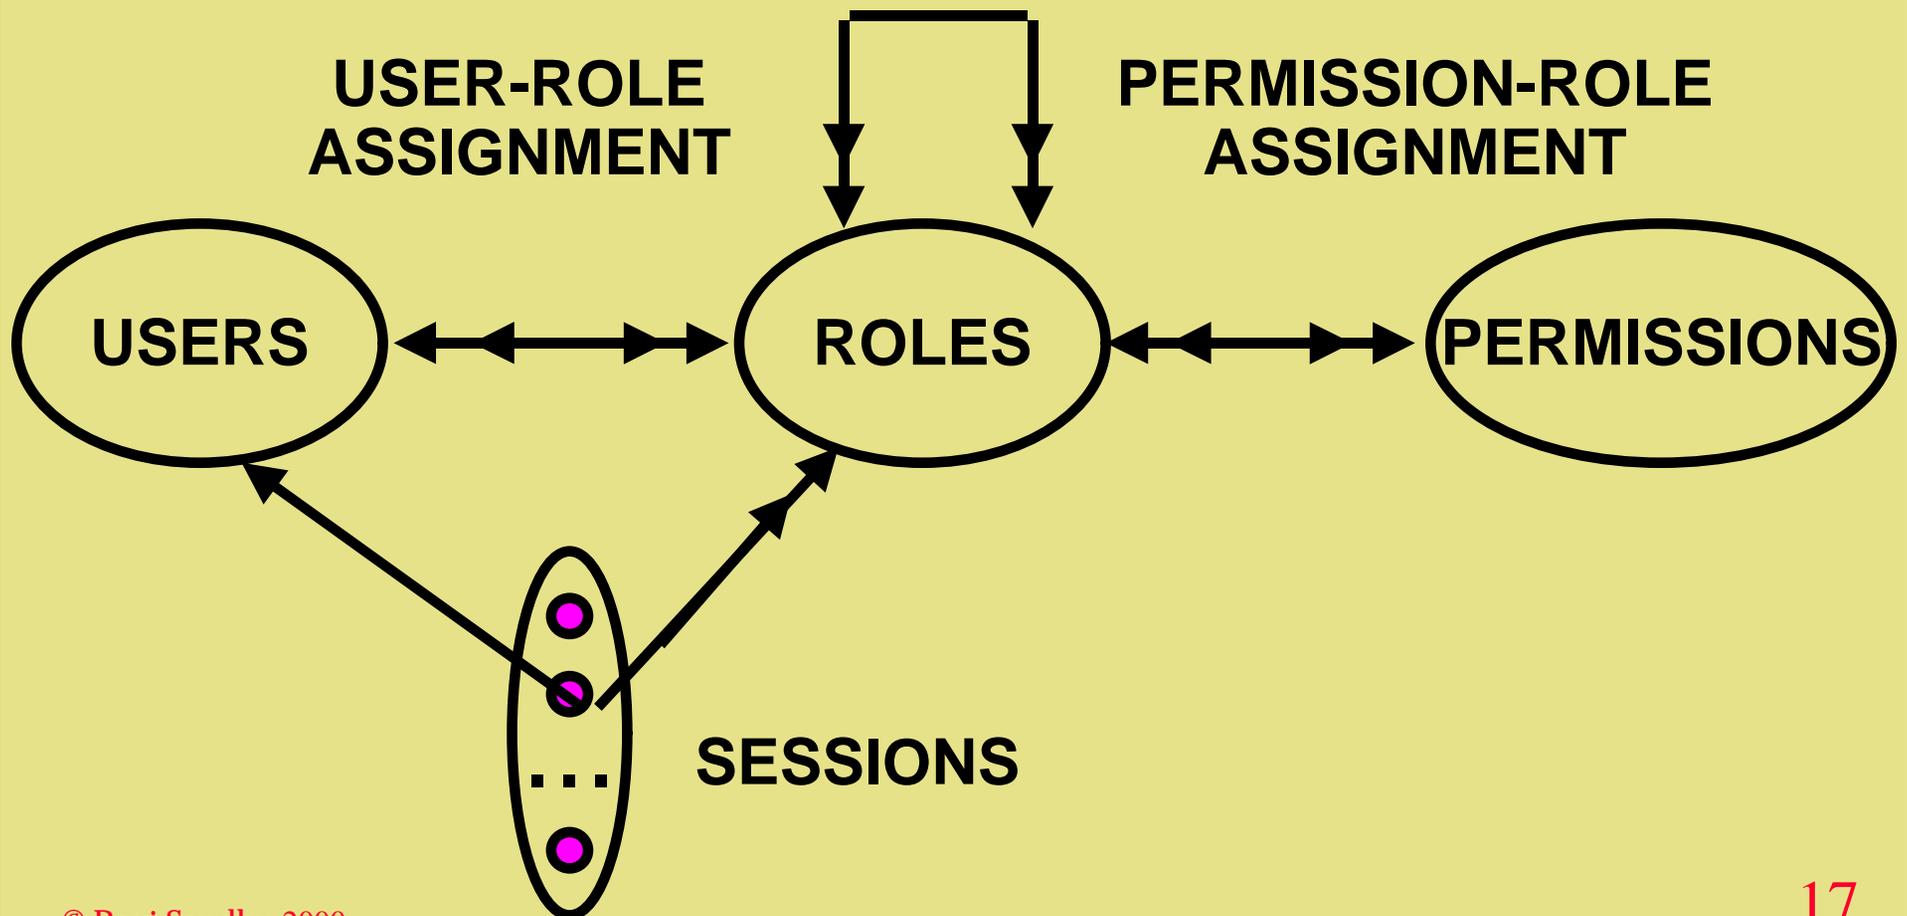

# USERS

---

- ◆ **Users are**
  - human beings or
  - other active agents
- ◆ **Each individual should be known as exactly one user**

# Smart Certificates

## ◆ Short-Lived Lifetime

### ● More secure

- typical validity period for X.509 is months (years)
- users may leave copies of the corresponding keys behind
- the longer-lived certificates have a higher probability of being attacked

### ● No Certificate Revocation List (CRL)

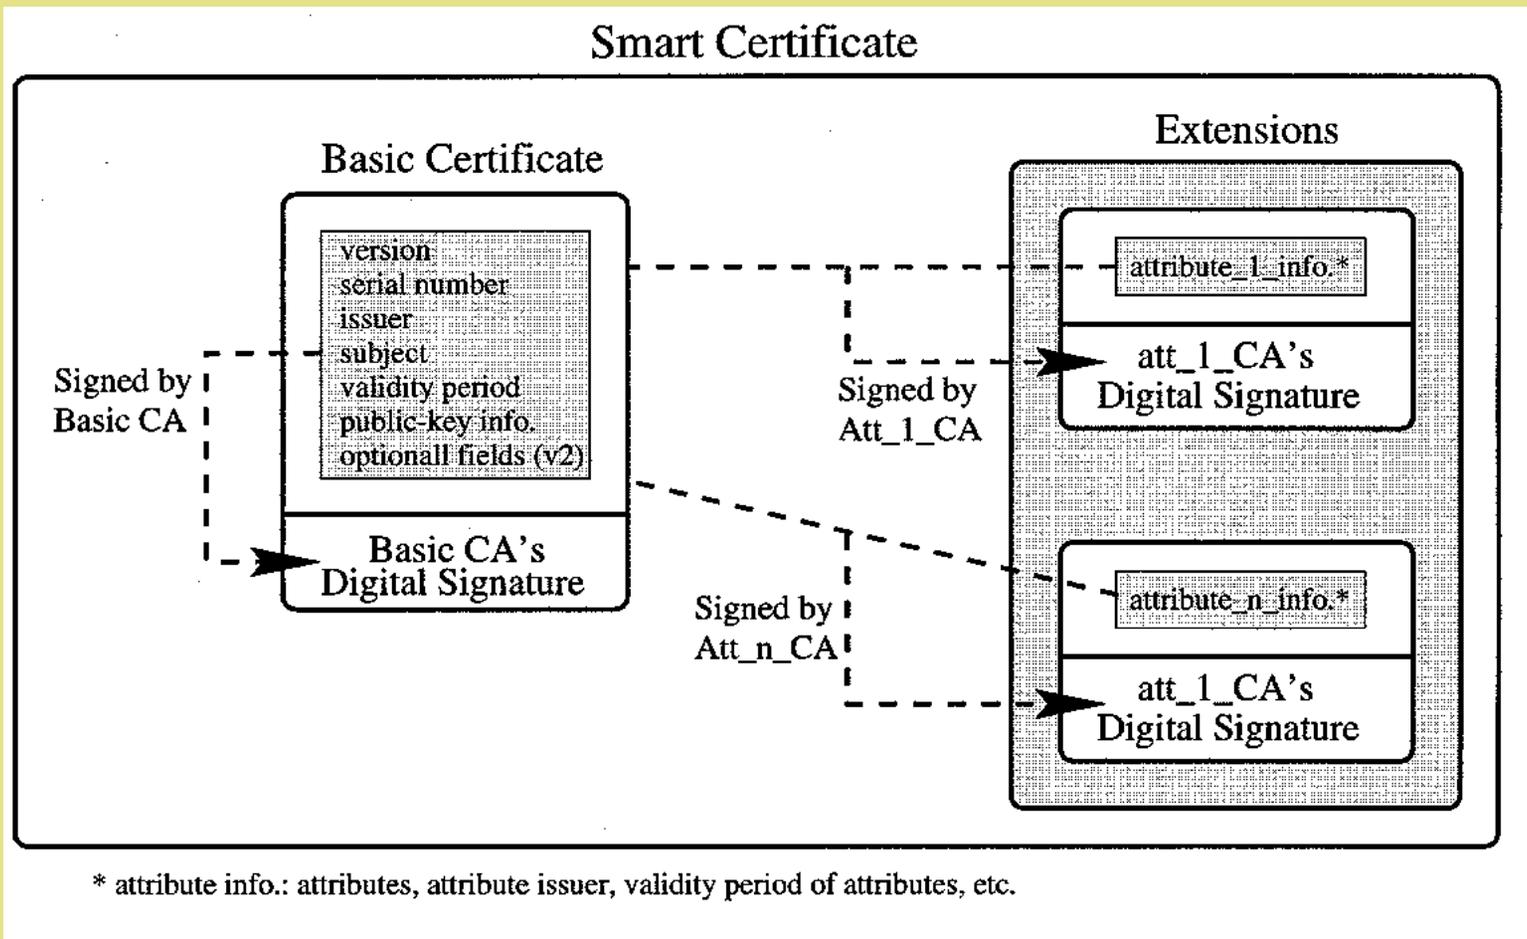

- simple and less expensive PKI

# Smart Certificates

## ◆ **Containing Attributes Securely**

- **Web servers can use secure attributes for their purposes**
- **Each authority has independent control on the corresponding information**
  - **basic certificate (containing identity information)**
  - **each attribute can be added, changed, revoked, or re-issued by the appropriate authority**
    - e.g., role, credit card number, clearance, etc.
- **Short-lived certificate can remove CRLs**

# Separate CAs in a Certificate

# Smart Certificates

## ◆ Postdated Certificates

- The certificate becomes valid at some time in the future
- possible to make a smart certificate valid for a set of duration
- supports convenience

## ◆ Confidentiality

- Sensitive information can be
  - encrypted in smart certificates
    - e.g. passwords, credit card numbers, etc.
